

CrossCONNECT Access Point

Every manager needs information on store performance in order to make the right decisions to protect and increase profits. Various components, like visitor counters and article surveillance systems should work together as a completely integrated system. The CrossCONNECT Access Point is the central product that makes this possible.

The CrossCONNECT Access Point gathers information required for store comparison and conversion analysis.

Information from visitor counters gives insight in store traffic and enables proper staff planning. This information is processed automatically and presented in the form of instantly available, relevant management information.

The obtained data can be combined and processed through software solutions supplied by Cross Point or it can be integrated into your Management Information System.

Unique features

- Central unit for data collection and remote service
- Easy integration into your management information system
- Full insight in store operations with specialized software
- In-store counting display
- Makes it possible to compare and analyze multiple stores
- Plug & play installation
- Remote service reduces costs
